

I am an XM satellite subscriber. I love it, it is a wonderful new technology. I especially love the local instant weather and traffic info I can get on it now. I can tune in that channel anytime I think I need traffic info. Such as traffic starts to get slow I can check to see if I need to plan an alternate route before I get stuck in the thick of things. Ground based radio does not have this feature. I have to wait till they decide to give me the info I need and sometimes wait till they even mention the road I am using. Please reject the NAB petition 04-160. All radio should have to compete for my business and right now XM has won it fair and square.
